- Java
- HTML/CSS
- MySQL

Projects

Lost Item Tracking Website

The Lost Item Tracker is a web-based application designed to help users report and find lost items. Built with HTML for structure, CSS for styling, and JavaScript for dynamic interactions, it allows users to submit and view lost item reports. The platform includes search functionality, item details, and status updates to streamline the process of tracking and recovering lost belongings.

Web-Based Calculator

Created an interactive web-based calculator using HTML, CSS, and JavaScript. Enabled real-time arithmetic operations including addition, subtraction, multiplication, and division with a responsive design. Implemented intuitive user interface elements and error handling for robust performance across different devices.

Internships

Web Development

Currently interning at Codsoft, where I am actively involved in developing and maintaining web applications. Responsibilities include designing responsive user interfaces, implementing features using modern web technologies (HTML, CSS, JavaScript), and collaborating with the development team to enhance user experience. Gaining hands-on experience with version control, debugging, and optimizing web performance while contributing to real-world projects.
